\* **Foldable** `foldable` is a type class that defines the `fold` method. It is used to define the `fold` method for a type. The `fold` method takes a function and a value, and returns a value. The function takes a value and a value, and returns a value. The value is the initial value. The function is applied to the initial value and the elements of the collection, in order. The result of the function is the final value.
